STAFF OF THE MAGNETIC DEPARTMENT

Principal Scientific Officer - H. F. Finch B. Sc.

Senior Scientific Officer - B. R. Leaton B. Sc.

Scientific Officer - S. R. C. Malin B. Sc. from 14.11.60

Senior Experimental Officers - *P. L. Rickerby
G. F. Wells until 14.10.60

Experimental Officer - *P. J. Willmorth from 11.4.60

Assistant Experimental Officers - S. R. C. Malin B. Sc. until 14.11.60
*P. J. Willmorth until 11.4.60

Scientific Assistants - *C. J. Mounty
P. R. Standen until 15.9.61
Miss M. P. Whale from 21.8.61

* Serving at Hartland

MAGNETIC RESULTS 1959, 1960, 1961 (HARTLAND)

INTRODUCTION

The magnetic observatory at Hartland, North Devon, has been operating continuously since 1957 January 1. This observatory replaced the Abinger magnetic observatory which closed on 1957 March 31, after the electrification of a nearby railway. The Hartland observatory is situated on the north-west boundary of the village of Hartland about twelve miles from the nearest town, Bideford. The nearest railway line, which is not electrified, is also about twelve miles from the observatory. The site is in the southern half of a large meadow, the northern side of which falls steeply away to form part of the southern slope of a wooded valley which extends two miles westward to the coast. Near this point the coast turns sharply eastward and runs about two miles north of the observatory.

The coordinates of the observatory are:

| | Geographic | Geomagnetic |
|-----------|-------------|-------------|
| Latitude | 50° 59'7 N | +54°6 |
| Longitude | 335° 31'0 E | +79°0 |

Height above m.s.l. 310 feet = 95 metres

The non-magnetic buildings have lime-brick walls, concrete and wood floors and wood and copper roofs.

The variometer building contains two thermally-insulated inner chambers separated by a central passage. The two chambers are thermostatically controlled and each is divided into three sections by partitions provided with light-proof sliding panels extending from floor to ceiling. Normally these panels remain open, but they may be closed when adjustments to instruments in any one section are in progress. Each section has its own exit door to the central passage. Of the six sections, five are furnished with concrete piers designed to accommodate the various magnetic recorders; the sixth serves as a small laboratory and contains the auxiliary equipment used for scaling the variometers.

The absolute instrument building is provided with a number of piers, certain of which are permanently allocated to the standard magnetometers. The remainder are available for use with other instruments.

Absolute Instruments

D, Declinometer with collimating magnet and theodolite

H, Schuster-Smith Coil magnetometer

Z, Dye Coil magnetometer

The potentiometers used in circuit with the coils are subjected annually to a check calibration at the National Physical Laboratory, Teddington.

Variometers

| La Cour | Time Scale | Element | Adopted Scale Value |
|-------------|------------|---------|---|
| Normal-run | 15mm/hr | D | 1.01/mm |
| | | H | 1959 Jan. 1-1960 Apr. 30 4.13γ/mm 1960 May 1-1961 Apr. 30 4.17γ/mm 1961 May 1-1961 June 7 4.20γ/mm 1961 June 7-1961 Dec. 31 4.13γ/mm |
| | | Z | 1959 Jan. 1-1959 Apr. 30 3.84γ/mm 1959 May 1-1959 June 30 3.91γ/mm 1959 July 1-1960 Apr. 30 (4.00-.0017y)γ/mm 1960 May 1-1961 Apr. 4 (4.04-.0019y)γ/mm 1961 Apr. 4-1961 Dec. 31 (4.30+.0028y)γ/mm |
| Quick-run | 3.1mm/min | D | 1.1/mm |
| | | H | 4.0γ/mm |
| | | Z | 4.4γ/mm |
| Insensitive | 15mm/hr | D | 2.52/mm |
| | | H | 21.0γ/mm |
| | | Z | 12.2γ/mm |

The scale values of the normal-run recorders were determined with the aid of Helmholtz-Gaugain coils. The imposed fields were approximately ±155γ and ±385γ. For D and H, the scale values obtained from the two series of determinations agreed within a small fraction of one per cent.

The observed scale values of the D and H normal-runs are given below:

| | 1959 | | 1960 | | 1961 | |
|-----------|-------|-------|-------|-------|-------|-------|
| | D | H | D | H | D | H |
| | '/mm | γ/mm | '/mm | γ/mm | '/mm | γ/mm |
| January | - | - | - | - | 1.010 | 4.190 |
| February | - | - | 1.008 | 4.161 | 1.012 | 4.189 |
| March | 1.007 | 4.133 | - | - | 1.013 | 4.194 |
| April | 1.011 | 4.147 | 1.007 | 4.173 | 1.009 | 4.195 |
| May | 1.010 | 4.146 | 1.005 | 4.162 | 1.008 | 4.204 |
| June | 1.008 | 4.133 | 1.006 | 4.161 | 1.008 | 4.137 |
| July | - | - | - | - | 1.010 | 4.124 |
| August | 1.005 | 4.135 | - | - | - | - |
| September | - | - | 1.004 | 4.155 | 1.004 | 4.133 |
| October | 1.006 | 4.161 | - | - | 1.008 | 4.137 |
| November | 1.005 | 4.160 | 1.008 | 4.189 | 1.006 | 4.149 |
| December | - | - | - | - | - | - |

During the latter half of 1959, four pairs of field values, ±155γ, ±256γ, ±385γ and ±539γ, were employed in the determination of the scale values for Z. The results obtained showed the variation of the scale value with ordinate. In an attempt to compensate for this effect the scale value was represented by

$$s = a + by$$

y being the ordinate in mm. This was an improvement, but a and b were found to vary slightly with the field strengths employed in the determination, suggesting a possible imperfection in the bearings of the magnet system. A detailed analysis of the results indicates a possible uncertainty of a few gammas in the deduced values of Z within the band approximately 200γ to 400γ below the normal value.

The marked changes of scale in Z on 1961 April 4, and in H on 1961 June 7, coincide with adjustments of the variometers. Adjustments to the optical system of the D variometer on 1961 November 30, were accompanied only by a small change of base-line.

The scale values of the quick-run and insensitive records are approximate and have been derived by comparisons of the movements of the traces with corresponding movements on the normal-run records.

Published Tables

In general the tables are self-explanatory but the following points should be noted:

Table IV. The lower limit for $K = 9$ is 500Y;

Tables V, VI and VII. No adjustment has been made for non-cyclic change. The inequalities of the north and west components and of inclination are computed from those of D, H and Z. Extreme values are printed in heavy type for 1959 and 1960 and in italics for 1961. Of the figures given under the heading 'Range', those entered against the year and the seasons are means of the relevant monthly values below which they appear, and do not represent the range of the mean curve for the period.

Magnetograms

The practice of publishing reduced-scale copies of the magnetograms has been discontinued. Microfilms of the magnetograms have been deposited at the four World Data Centres, from which copies may be obtained. Alternatively, copies of magnetograms for individual days may be obtained from:

Geomagnetism Department,
Institute of Geological Sciences,
Royal Greenwich Observatory,
Herstmonceux Castle,
Hailsham,
Sussex,
England.

† Mean of seven months, June to December.

†† Mean of ten months, March to December.

In 1818, 1819 and 1820 numerous observations of Declination were made with a Dollond needle.

In 1861 new Unifilar Apparatus for absolute Horizontal Intensity and the Airy Dip-Circle were introduced, both sets of apparatus being used in that year. In 1864 the excavation of the Magnetic Basement caused a suspension of Declination Observations. From 1914 the Inclination was determined with an Inductor.
