# Magnetic Results 1981: Eskdalemuir, Hartland and Lerwick Observatories

## INTRODUCTION

This bulletin contains magnetic results from the Observatories at Eskdalemuir, Hartland and Lerwick for 1981.

### *Reduction of results*

**Units** SI Units are used in this bulletin. Field values are expressed in terms of flux density. The unit used, the nano-tesla, is equal to one gamma (e.m.u.)

**Nomenclature** The following customary symbols are used for the components of magnetic field.

|          |                      |          |                 |
|----------|----------------------|----------|-----------------|
| <i>D</i> | declination          | <i>X</i> | north intensity |
| <i>H</i> | horizontal intensity | <i>Y</i> | east intensity  |
| <i>Z</i> | vertical intensity   | <i>I</i> | inclination     |
| <i>F</i> | total intensity      |          |                 |

**Computation** The observatory magnetograms are hand-scaled at the observatories. The tabulated hourly ordinates are punched onto cards at Edinburgh. The computations are carried out on a PDP 11/70 computer.

**Tables** In general the tables are self explanatory. The hourly values of horizontal and vertical intensity are tabulated in Units of 1 nT. The hourly values of declination are expressed in units of  ${}^1/{}_{10}$  minute of Arc.

The lower limit for  $K = 9$  is 500 nT at Hartland, 750 nT at Eskdalemuir and 1000 nT at Lerwick. All three observatories contribute to  $K_p$ ; Hartland is also an AA index observatory.

**Magnetograms** Microfilm of the 1981 magnetograms have been sent to the four World Data Centres at Boulder, Moscow, Copenhagen and Kyoto. Copies may be obtained from these centres.

Computer generated magnetograms have been prepared throughout 1981 using the one minute values of  $H$ ,  $D$ , and  $Z$  derived from a digitally recording fluxgate magnetometer system at each observatory. A monthly booklet containing these magnetograms, preliminary hourly values, and  $K$  indices is available on request from:

Geomagnetism Unit  
Institute of Geological Sciences  
Murchison House  
West Mains Road  
Edinburgh EH9 3LA  
Telephone 031-667 1000  
Telex 727343 SEISED G

World Digital Data Centre WDDC-C1, which is centred at the above address, holds the following hourly values for the UK observatories on the magnetic tape.

| Micropulsation instruments              | A 3-component rubidium vapour magnetometer, which records at 2½-second intervals on cassette tape, is operated at all three observatories. The measured components are magnetic NE, NW, and Z.  |  |   |
| Automatic instruments                   | An EDA FM100B fluxgate magnetometer monitors <i>H</i> , <i>D</i> , and <i>Z</i> at each observatory. The data is recorded at 30 second intervals on cassette tape. At Hartland and Lerwick a proton <i>F</i> value is recorded at the start of each 10 minute data block. Standby systems with an extended dynamic range are installed at Hartland and Lerwick. |  |   |
